Site Survey App: Add to Your iPhone Home Screen

Oct 30, 2026 · @Kevin

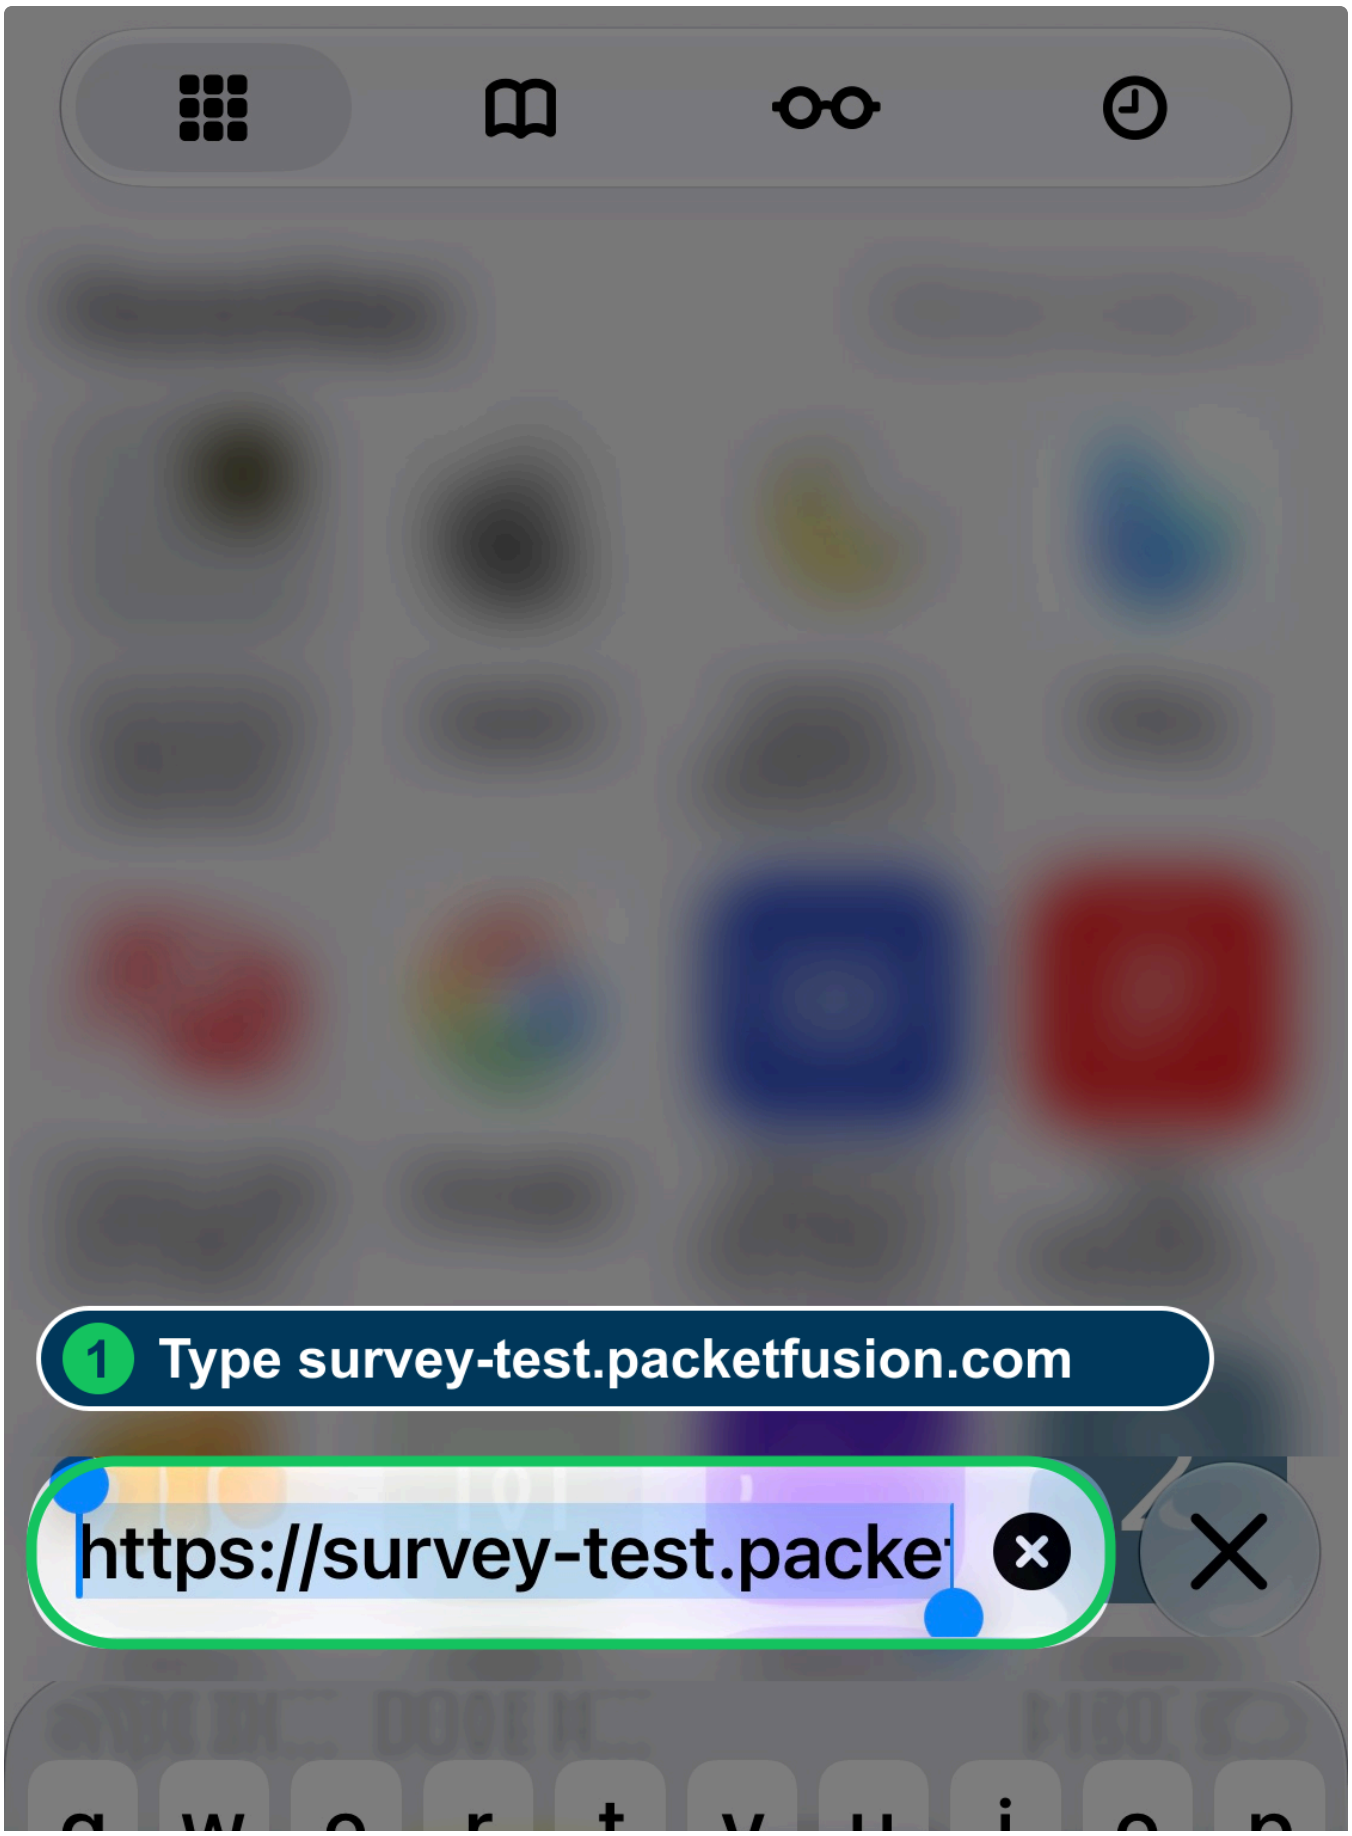

Install the Packet Fusion Site Survey app on your iPhone before you arrive on site. It takes about one minute. Once it's installed, the app opens full screen from your Home Screen, just like any other app.

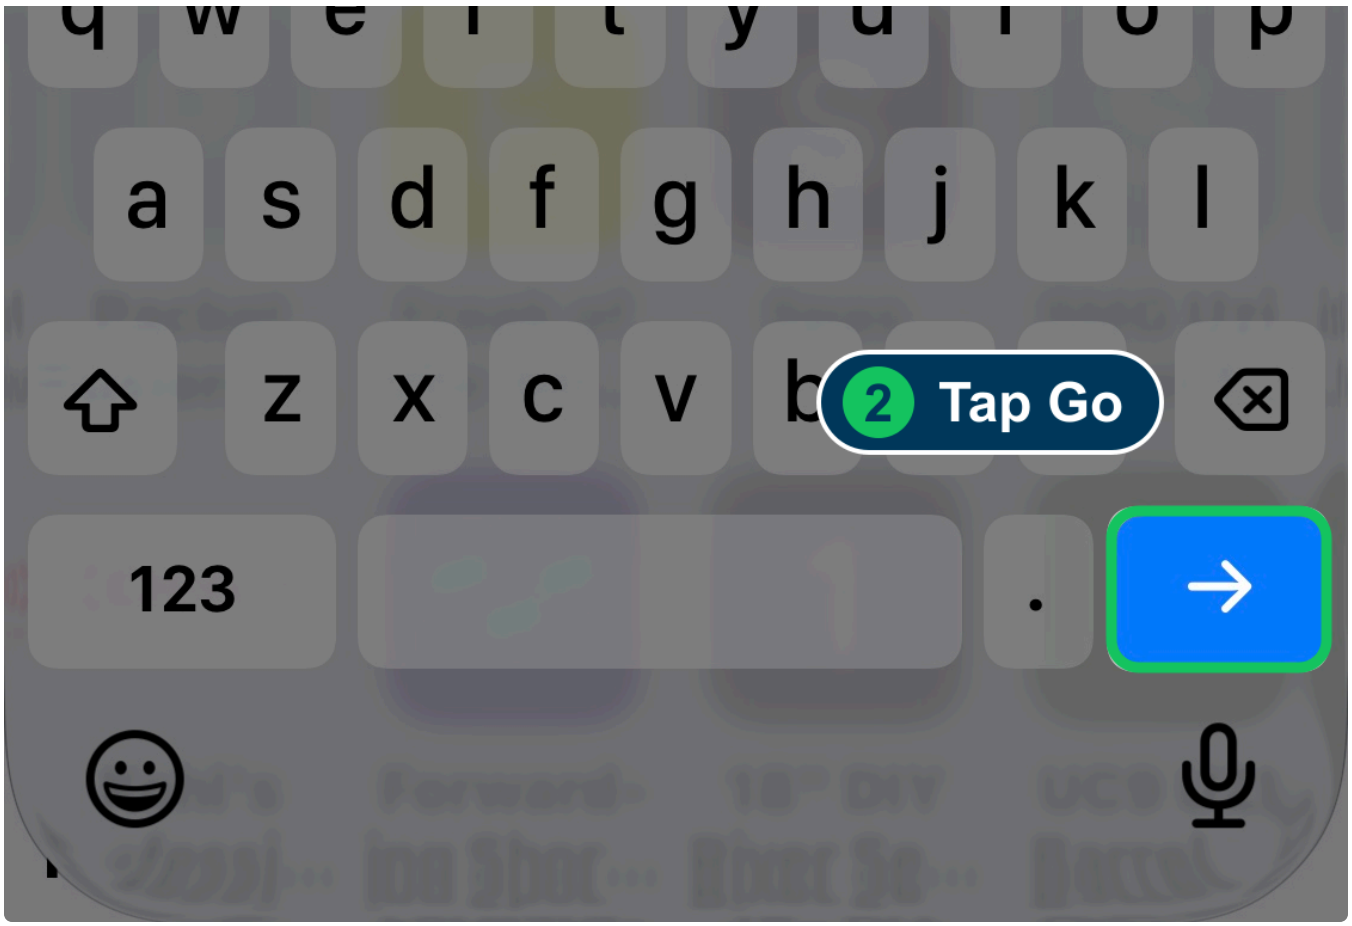

What you need:

- An iPhone with **Safari** (this does not work from Chrome or other browsers on iPhone)
- The survey address: **survey-test.packetfusion.com**
- A Wi-Fi or cellular connection for the first install

Steps 1–2: Open the survey site in Safari

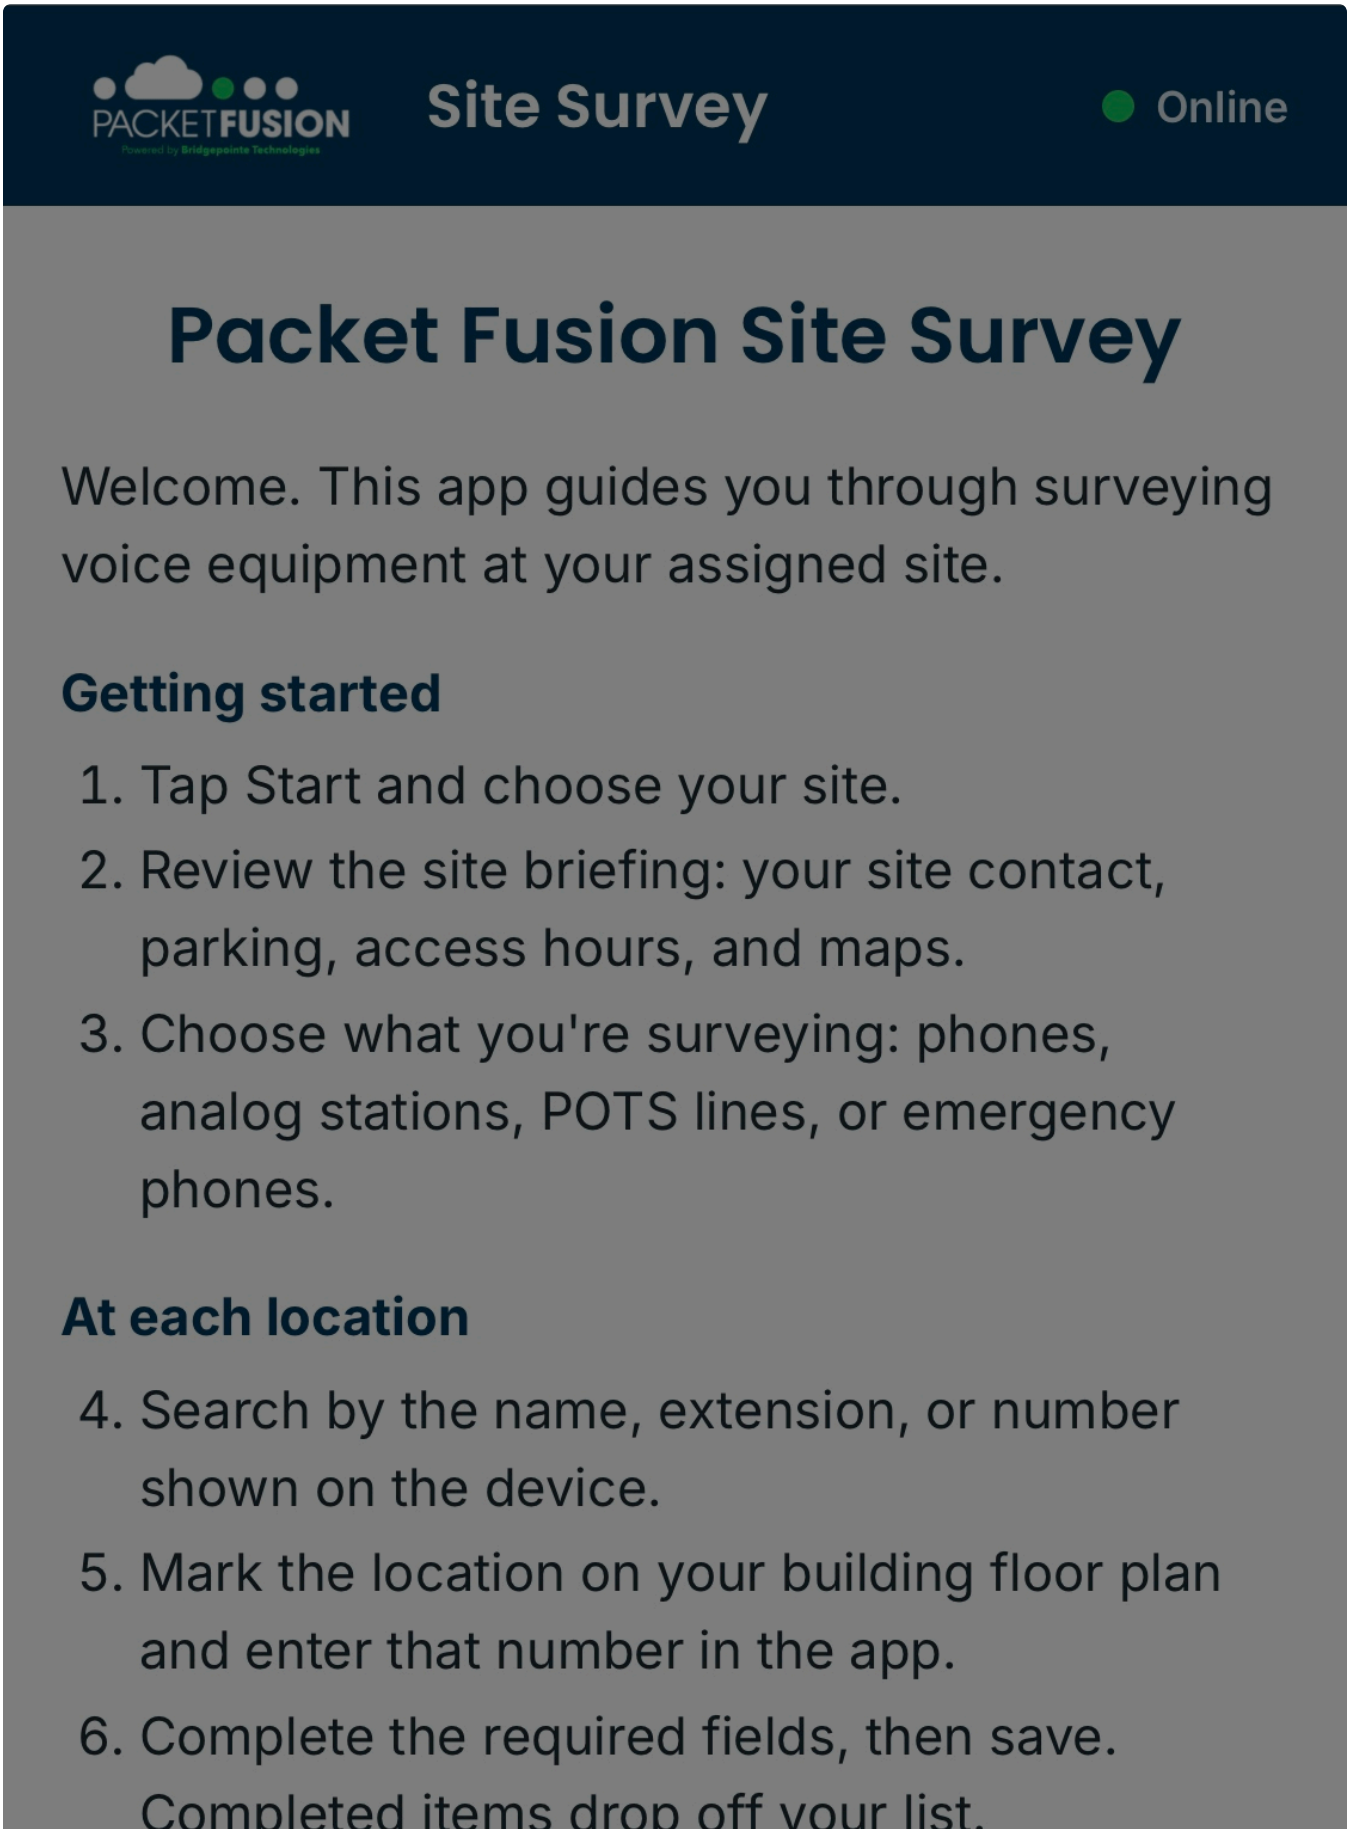

1. Open **Safari**, tap the address bar, and type **survey-test.packetfusion.com**.
2. Tap the blue **Go** arrow on the keyboard. The Packet Fusion Site Survey welcome page loads.

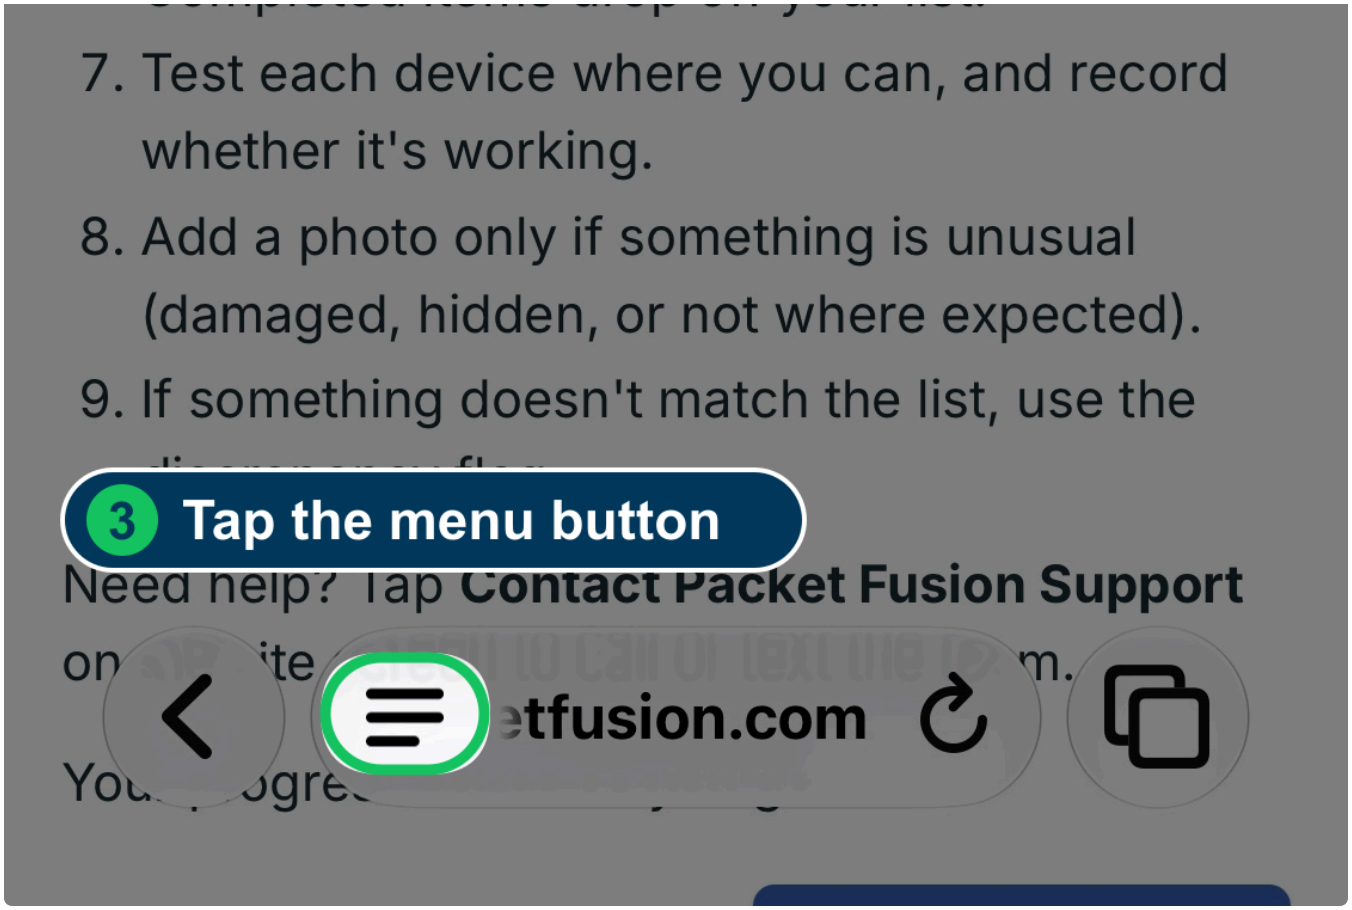

1 Type survey-test.packetfusion.com
https://survey-test.packe

Step 3: Open the page menu

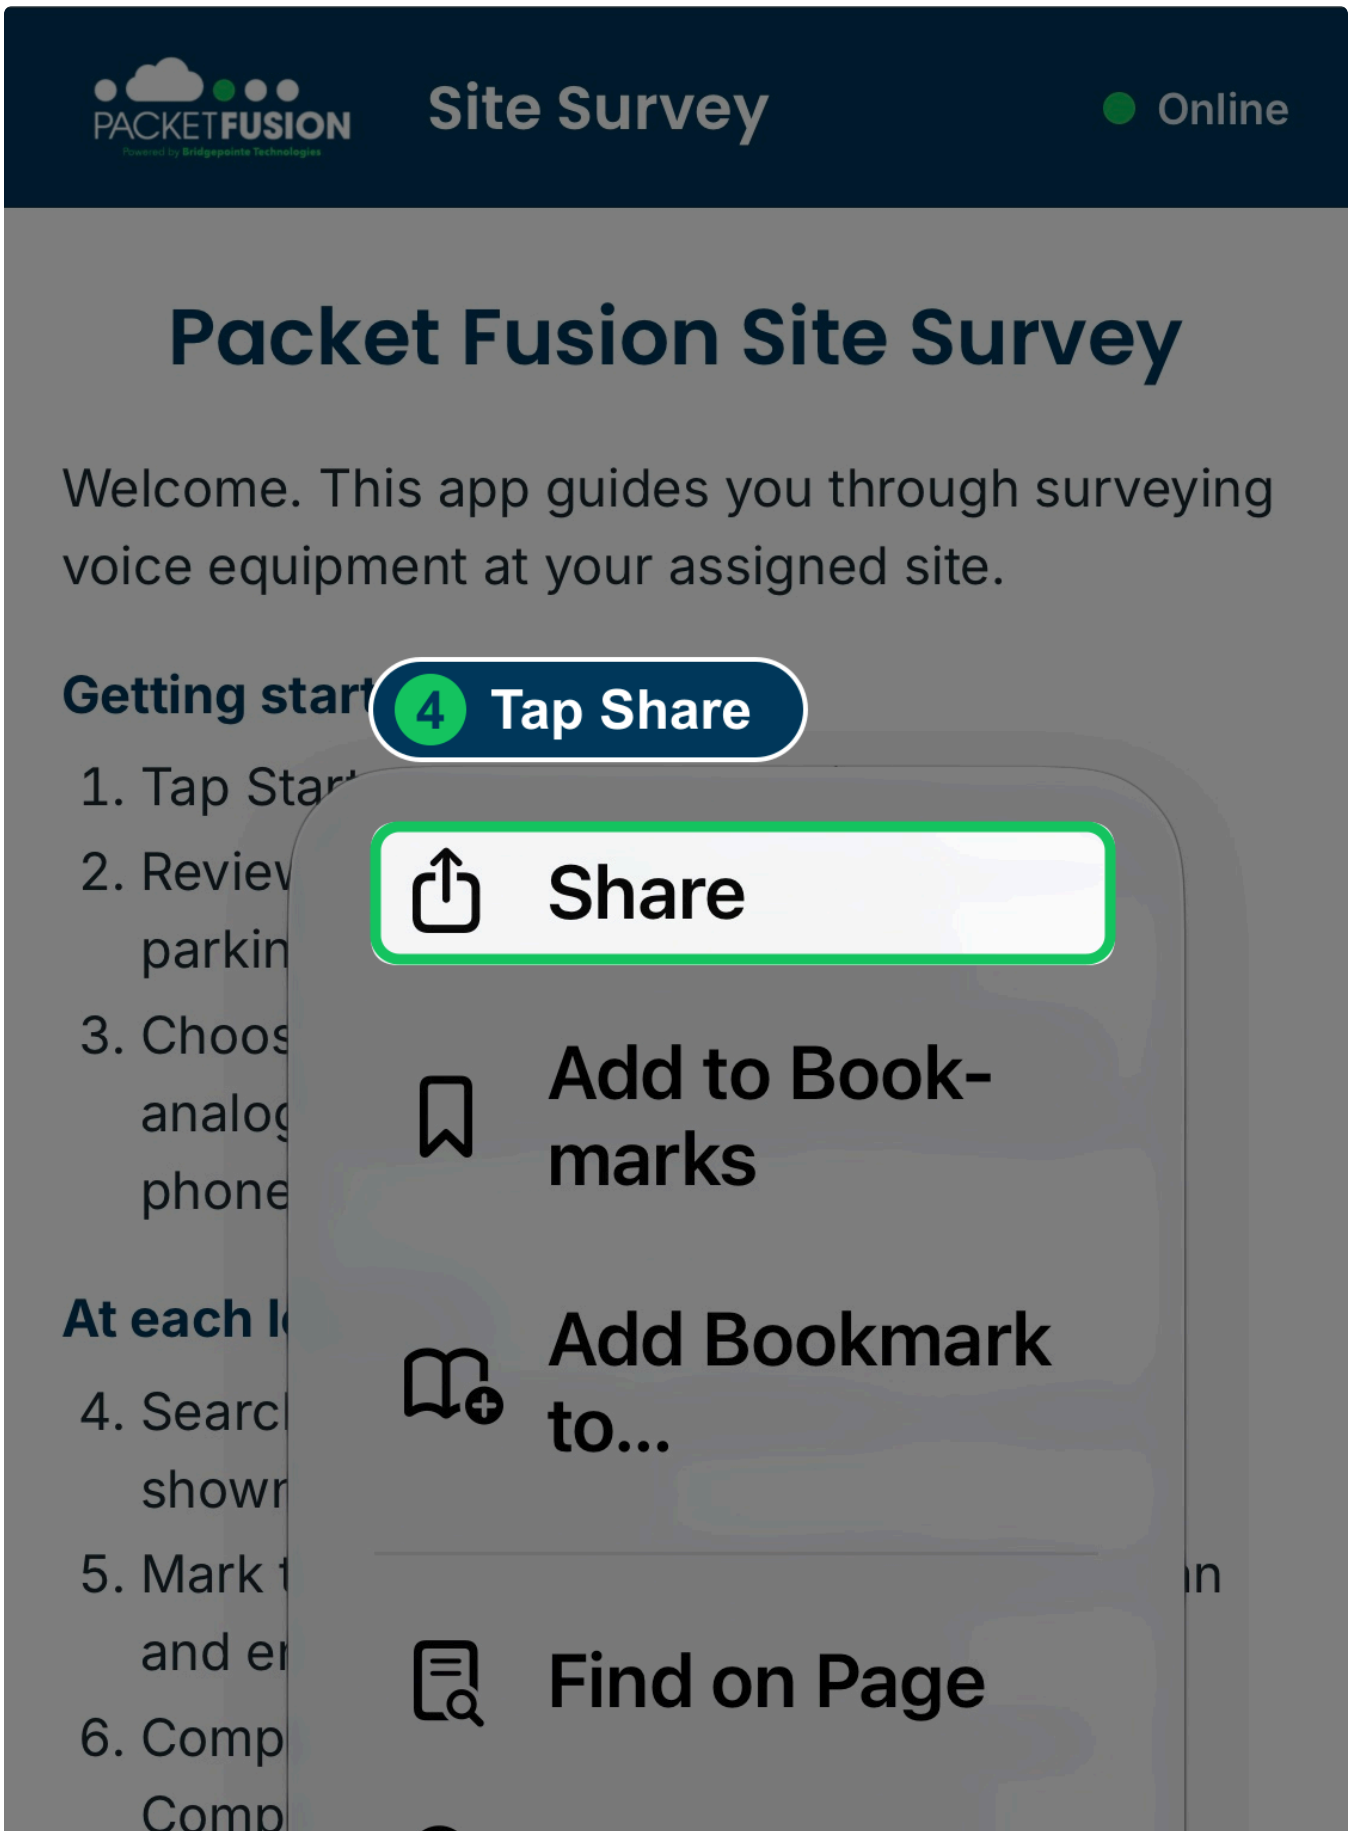

3. At the bottom of the screen, tap the **menu button** (three lines) on the left side of the address bar.

Packet Fusion Site Survey
Welcome. This app guides you through surveying voice equipment at your assigned site.
Getting started
1. Tap Start and choose your site.
2. Review the site briefing: your site contact, parking, access hours, and maps.
3. Choose what you're surveying: phones, analog stations, POTS lines, or emergency phones.
At each location
4. Search by the name, extension, or number shown on the device.
5. Mark the location on your building floor plan and enter that number in the app.
6. Complete the required fields, then save. Completed items drop off your list.

Step 4: Tap Share

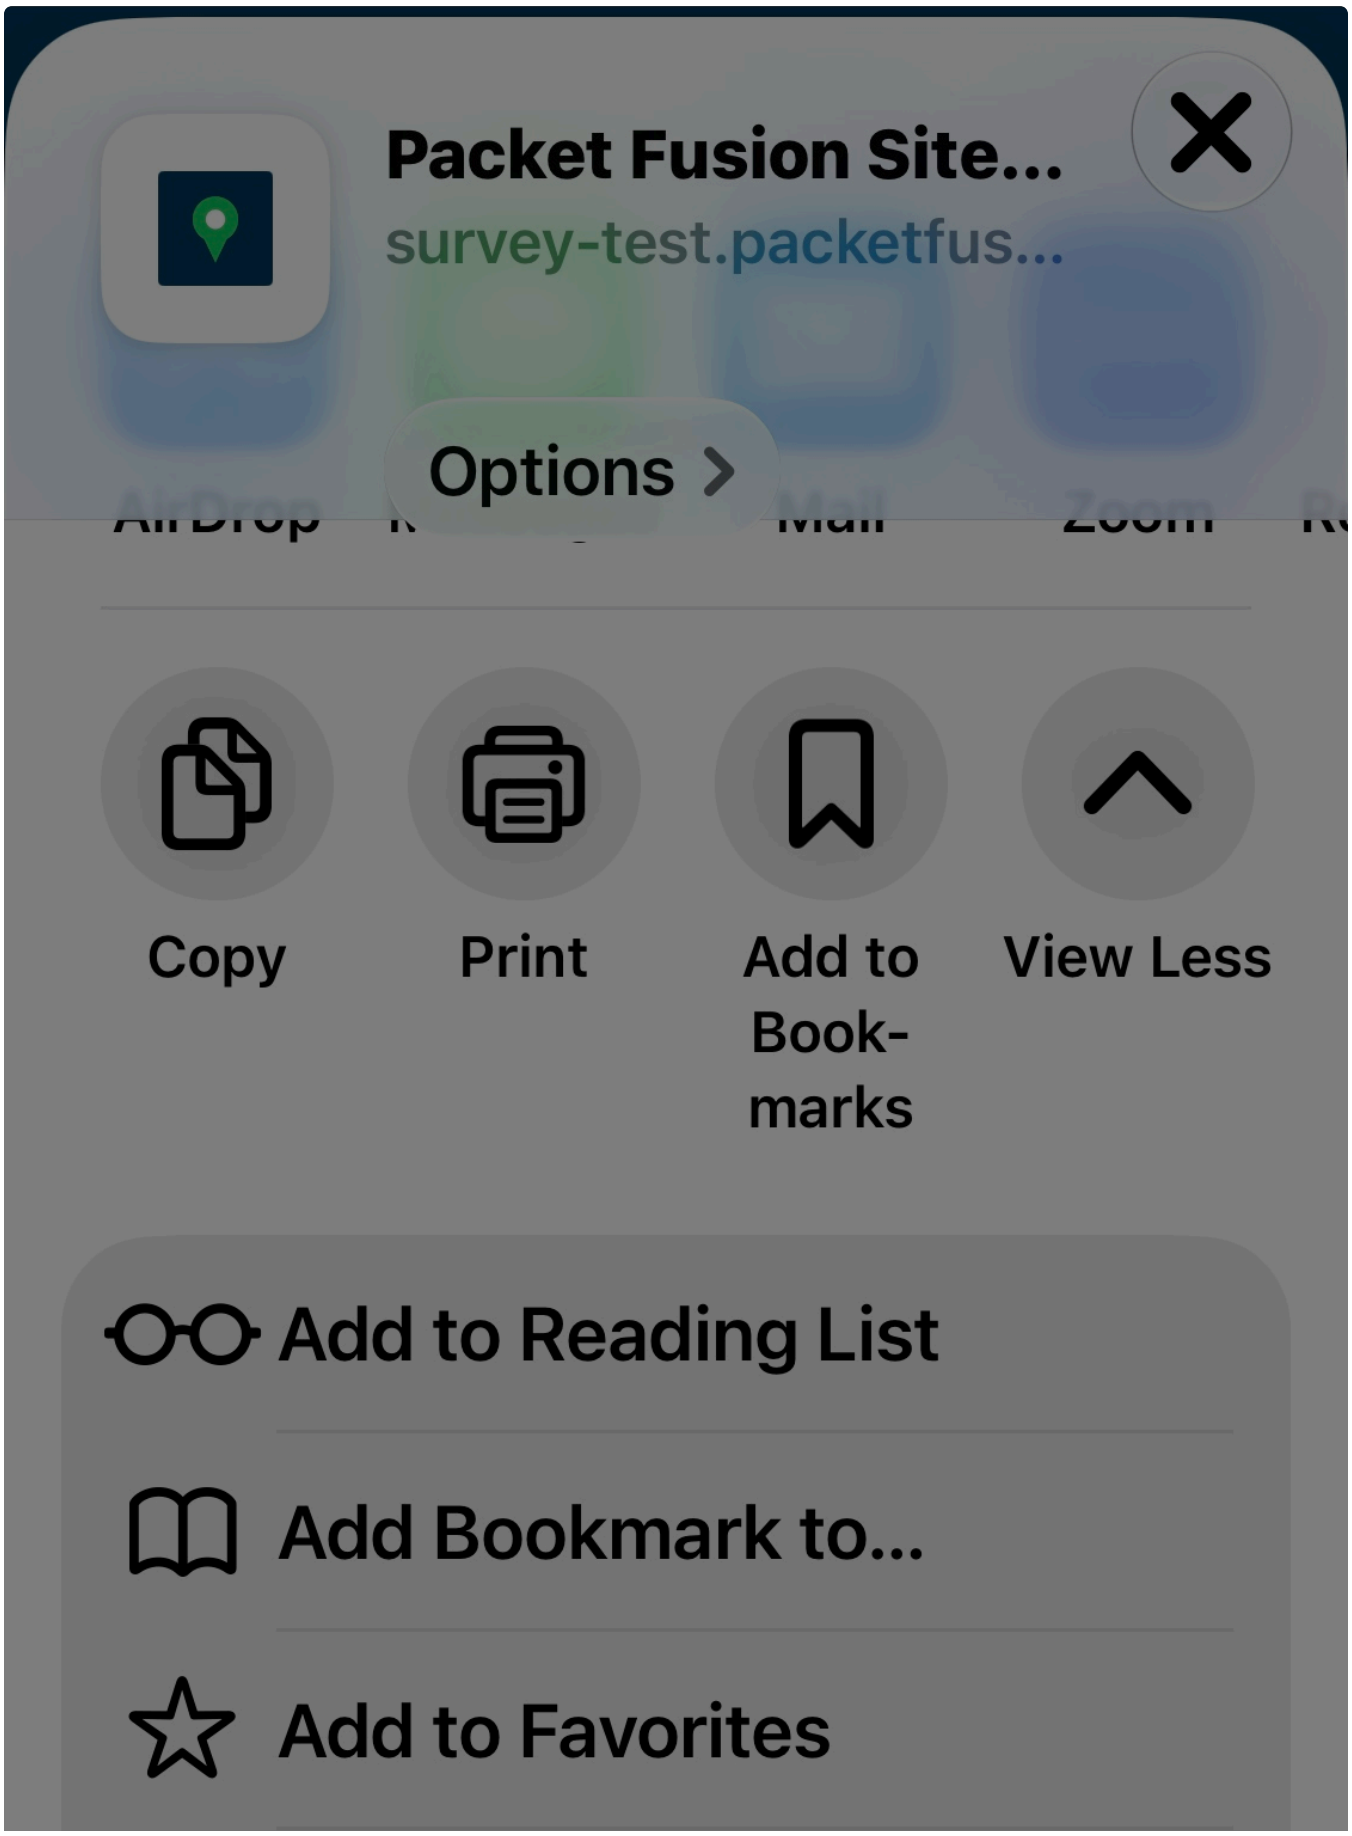

4. In the menu that opens, tap **Share** at the top.

Steps 6–7: Confirm and add

6. Make sure **Open as Web App** is switched **on** (green). This makes the app open full screen.
7. Tap **Add** in the top-right corner. You can keep the name **Site Survey**.

You're done

The **Site Survey** icon (a green map pin on navy) is now on your Home Screen. Tap it to start each survey. You don't need to open Safari again.

If something looks different:

- **No menu button in the address bar.** On older iOS versions, tap the **Share** button (a square with an up arrow) in the bottom toolbar, then go to step 5.
- **No Add to Home Screen option.** Make sure you're in **Safari**, not Chrome or another browser, and tap **View More** in the share sheet.

- **No Open as Web App switch.** Your iOS version doesn't show it. Tap **Add** anyway; the app still works.

Need help? Tap **Contact Packet Fusion Support** on the site survey welcome page.
